## **What are Specialty drugs?**

Specialty drugs are those drugs used to treat complex or chronic conditions, and which usually require close monitoring, such as multiple sclerosis, hepatitis, rheumatoid arthritis, cancer, and other conditions that are difficult to treat with traditional therapies. Specialty drugs may be self-administered in the home by injection (under the skin or into a muscle), by inhalation, by mouth, or on the skin. These drugs may also require special handling, special manufacturing processes, and may have limited prescribing or limited pharmacy availability.

## **What is my specialty benefit coverage?**

As part of your Scott & White Health Plan (SWHP) coverage, you may have a specialty benefit. This document will help you understand your specialty benefit and the SWHP specialty formulary.

Not every specialty benefit is the same. The best way to figure out your specialty benefit coverage is to review your *Evidence of Coverage* or call the SWHP Pharmacy Help Desk.

## **What is the Scott & White Health Plan specialty formulary?**

A formulary is a list of covered drugs selected by SWHP in consultation with a team of health care providers. The list represents the specialty drugs believed to be a necessary part of a quality treatment program. SWHP will generally cover the drugs listed on the formulary as long as the drug is medically necessary and plan rules are followed. The list contains both brand-name and generic medications and is updated regularly.

This SWHP specialty formulary is an open formulary. This means that preferred drugs are listed in this document and are covered under your benefit, but coverage for drugs not listed (non-formulary) may also be provided. Non-formulary drugs may require prior authorization or may be subject to clinical edits.

The formulary may be tiered meaning there are different copayment levels for drugs on different levels.

The formulary may change because we review new medical information regarding current drugs listed as well as new drugs recently approved by the FDA.

## **How was the specialty formulary created and how are new medications reviewed?**

The SWHP Pharmacy and Therapeutics (P&T) Committee meets regularly to review new drugs approved by the FDA and new information regarding drugs that are already on the formulary. The Committee is primarily made up of physicians, pharmacists and nurses. It reviews information and scientific evidence concerning safety, effectiveness and current use in therapy.

## **Does the specialty formulary ever change?**

Since the P&T Committee meets regularly and reviews new information, the formulary may change. Below are some possible reasons the formulary could change:

- Generic forms of the brand drug become available. The brand-name medication may be subject to a higher copayment and possibly a penalty. The generic medication may be covered at the lower copayment.
- New drugs may be added by the P&T Committee.
- A drug may be withdrawn from the market by the FDA.
- A drug becomes available without a prescription (becomes over-the-counter), then the drug may be removed from the formulary. Often, drugs available over-the-counter are not covered under the prescription benefit.

## **How am I notified of changes to the formulary?**

You can find the SWHP formularies on our website at [swhp.org](http://swhp.org). On the website, formularies are updated quarterly (every 3 months), and the Formulary Changes document is updated monthly. The Formulary Changes document outlines changes made to the formularies. The Formulary Changes document is meant to notify members of changes to the formularies that occur between formulary updates. If you have any questions or wish to obtain a printed copy of the formularies or pharmaceutical management procedures, please contact SWHP Prescription Services at 1-800-728-7947.

## **What are brand-name and generic drugs?**

SWHP covers both brand-name and generic drugs. A brand-name drug is one that is produced under the original manufacturer's brand name. A generic drug is approved by the FDA as having the same active ingredient as the brand name drug. Generally, generic drugs cost less than brand-name drugs but the quality and effectiveness is the same. Generic drugs may differ from the brand-name drug in color, shape, flavor or inactive ingredients. Some brand-name drugs have a generic equivalent and others do not. If a generic form of a brand-name drug becomes available, the brand-name

medication may be subject to a higher copayment and possibly a penalty. The generic medication may be covered at the lower copayment.

### **What is generic substitution?**

Generic substitution occurs when a pharmacist dispenses an FDA approved generic drug in place of a brand name drug. Generic substitution will automatically occur at SWHP Provider Pharmacies. Prescribers may choose to use a brand name product and not allow generic substitution by indicating on the prescription "brand necessary" or "brand medically necessary." Per state law, these statements must be handwritten by the prescriber.

### **What is a therapeutic interchange?**

A therapeutic interchange involves the dispensing of chemically different drugs that are considered equivalent in safety and effectiveness by the SWHP P&T Committee. For one medication to be dispensed in place of another, the prescribing physician and the member must approve of the interchange. When a therapeutic interchange program is put in place, the program will allow SWHP Pharmacies to substitute and dispense to the plan member, the SWHP-approved clinically equivalent product.

### **What are pharmaceutical management procedures?**

Pharmaceutical management procedures are processes that help manage the drug formulary in order to provide the most cost-effective therapy options. As part of such processes, restrictions (described in the following section) may be applied to certain drugs on the formulary.

### **Are there any restrictions on my coverage?**

Some covered drugs may have additional requirements or limits on coverage. These requirements and limits may include:

- **Prior Authorization:** SWHP requires you or your physician to get prior authorization before filling certain drugs. *Drugs needing prior authorization are noted on the formulary by a "PA" next to the drug name.*
- **Quantity Limits:** For certain drugs, SWHP limits the amount of medication covered. Quantity limits help ensure the appropriate use of medications. Quantity limits are often applied for safety reasons (e.g. limiting products containing acetaminophen to maximum safe limits). *Drugs with quantity limits are noted on the formulary by a "QL" next to the drug name.*

- **Step Therapy:** In some cases, SWHP requires you to first try certain drugs to treat your medical condition before another drug will be covered for that condition. *Drugs with step therapy are noted on the formulary by an "ST" next to the drug name.*
- **Age Restriction:** There are certain medications which may be limited to a certain age group. *Drugs with age restrictions are noted on the formulary by an "AL" next to the drug name.*
- **Drug Exception:** A medication may require a drug exception for a variety of reasons, i.e.; may be limited to certain specialty prescribers, limited to certain pharmacies, may be a medication that is part of the therapeutic interchange program, or various other reasons. Please contact our customer service department for questions regarding these medications. *Drugs with drug exception are noted on the formulary by a "DE" next to the drug name.*
- **Gender Limit:** There are certain medications which may be limited to a certain genders. *Drugs with gender limits are noted on the formulary by a "GL" next to the drug name with an f for female and an m for male.*

### **How do I request an exception to the SWHP specialty formulary?**

Your physician can ask SWHP to make an exception to the formulary. There are several types of exceptions that can be requested:

- Exception to waive a coverage restriction.
- Exception to waive a limit on a drug (example: waive or increase a quantity limit).

To request an exception, your physician must submit a coverage exception form to Scott & White Prescription Services. Both you and your physician will be notified of the approval by mail and the drug will be covered under the applicable copayment. If the request is denied, both you and your physician will be notified. You may still purchase the medication for the full price.

### **What drugs are not covered by my specialty benefit?**

Please refer to your *Evidence of Coverage* for complete plan coverage, limitations and exclusions specific to your specialty benefit.

### **How much medication does my copayment cover?**

You can get up to a 34-day supply of medication for a single copayment. Some medications may have quantity limit, restricting the amount of drug you can get per prescription or per copayment.

Please refer to your *Evidence of Coverage* for complete plan coverage.

### **How can I save money on prescriptions?**

Medications on the SWHP specialty formulary generally cost less than medications not listed. A generic medication will usually be the lowest copayment option. Ask the provider or pharmacist whether generic medications are appropriate.

Be sure to take this formulary with you to each visit so that the provider knows what medication is covered.

### **Abbreviations**

<b>T1, T2, T3, T4</b>	Copayment tiers
<b>PA</b>	Prior authorization required
<b>QL</b>	Quantity limit
<b>AL</b>	Age-limit
<b>ST</b>	Step-therapy required
<b>DE</b>	Drug Exception
<b>GL</b>	Gender Limit (f=female, m=male)

**NOTE:** When a generic form of the brand drug becomes available, the brand-name medication may be subject to a higher copayment and possibly a penalty. The generic medication may be covered at the lower copayment. The print formularies may not have the most up-to-date coverage of drugs.
